

deepen

Diamond Inventory & Catalog App — Design Preview

Customer mobile app · Storefront kiosk · Admin catalog sharing

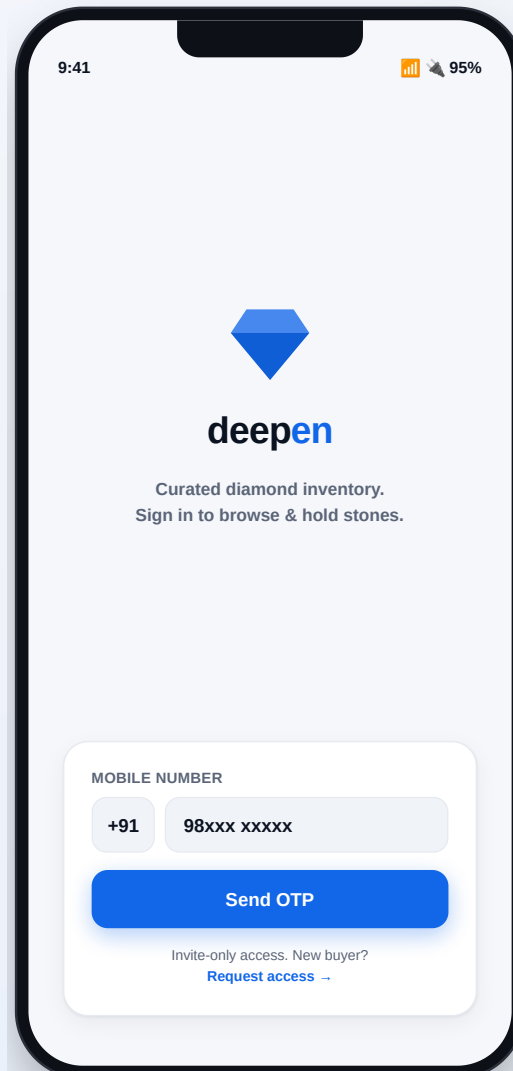

THE HOME SCREEN

What buyers see first

The moment a customer opens the app they land here — not a blank search box. New arrivals, market news, upcoming shows and your announcements greet them, giving a reason to open the app daily. A prominent search bar takes them into the inventory in one tap.

- **New arrivals** pull buyers straight to fresh stock
- **Announcements & offers** you post from the admin panel
- **Market news** keeps buyers informed and returning
- **Upcoming events** — trade shows & private viewings

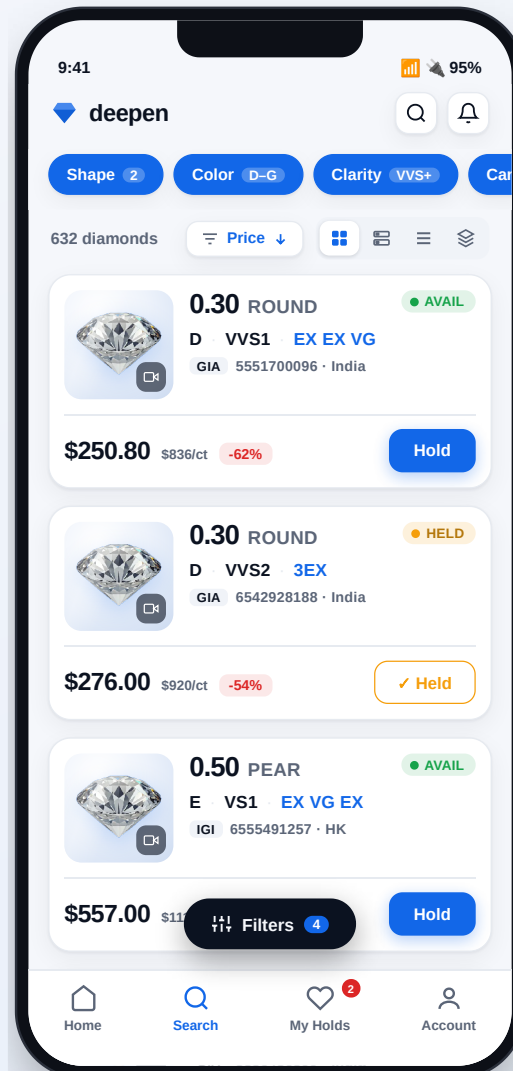

SECURE ACCESS

Invite-only login

Access is invite-only, just like your current system — pricing stays private to approved buyers. Customers sign in with their mobile number and a one-time code. No passwords to forget.

- ☐ **Phone number + OTP** — fast and secure
- ☐ **Invite-only** — you approve every buyer
- ☐ Prices are never shown to the public

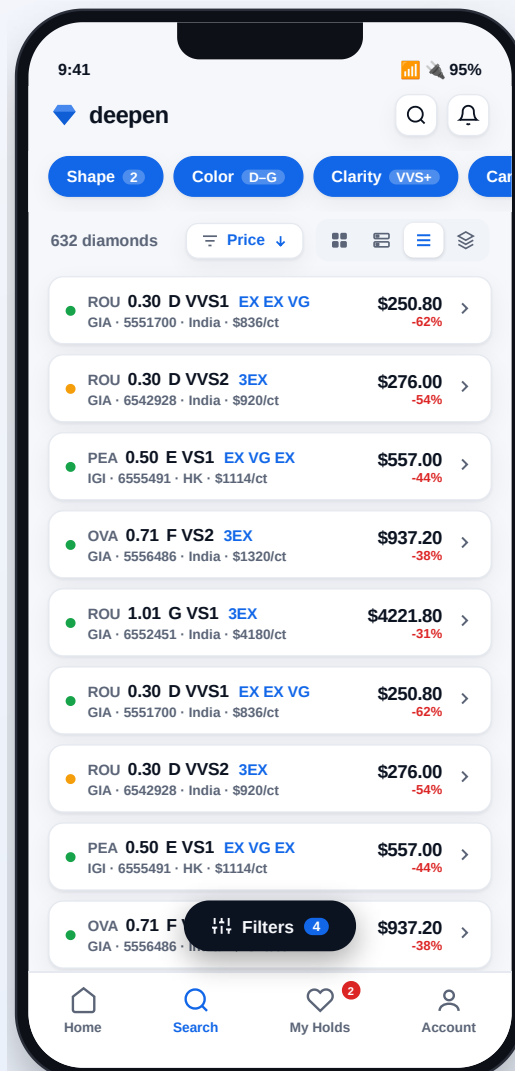

BROWSE — CARD VIEW

Visual browsing

The rich card view shows each diamond with its photo, key specs and price at a glance — ideal for relaxed browsing and for the storefront kiosk display.

- Real **diamond photo & video** per stone
- Shape, carat, colour, clarity & make up front
- Rap price, discount % and total** — full trade pricing
- One-tap **Hold** button on every card

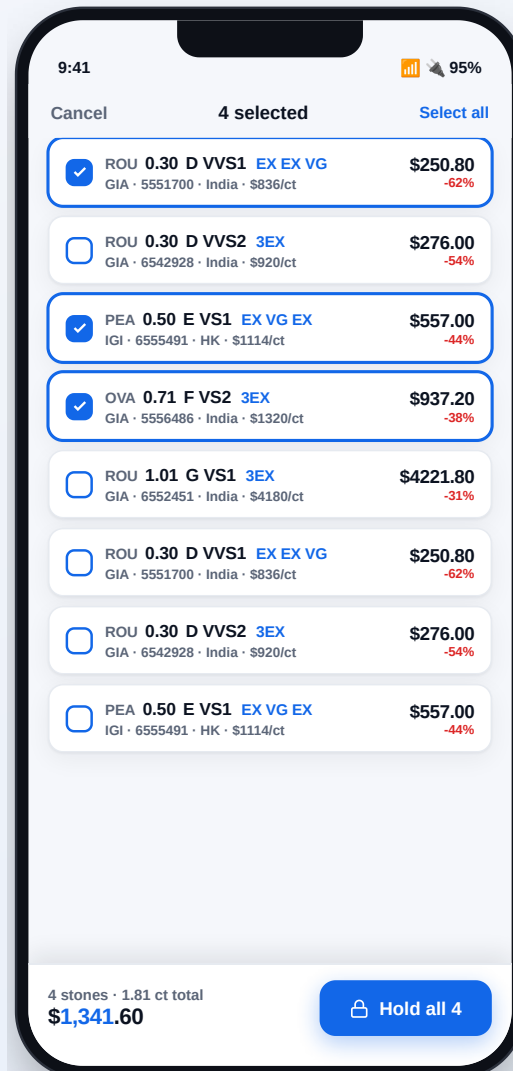

BROWSE — COMPACT & LIST

Built for pros who know what they want

Experienced buyers filter first, then scan fast. Compact-card and dense list views fit many more stones per screen — the same information as your current desktop tool, optimised for a phone.

- ☒ **Compact cards** — small photo, more per screen
- ☒ **Dense list** — trade-standard columns, no images
- ☒ Switch views instantly with one control
- ☒ Same data your buyers already know

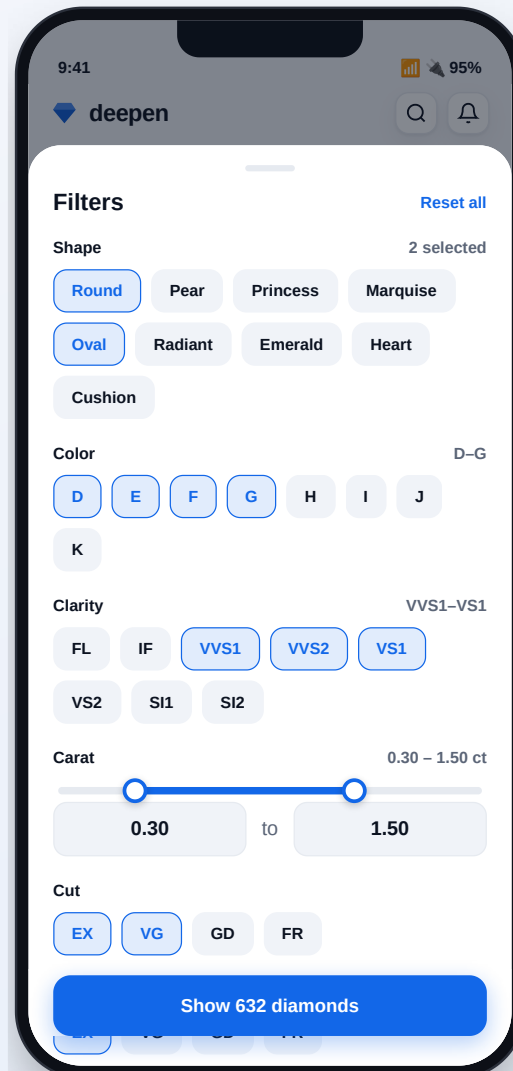

HOLD MANY AT ONCE

The power feature

Buyers rarely want just one stone. Long-press to enter select mode, tick as many diamonds as they like, and see a running total — then hold the whole batch in a single tap. You get notified instantly.

- ☒ **Multi-select** across the list
- ☒ Live tally: **count · total carat · total price**
- ☒ **Hold all** in one tap — you're notified at once
- ☒ Matches how buyers really shop

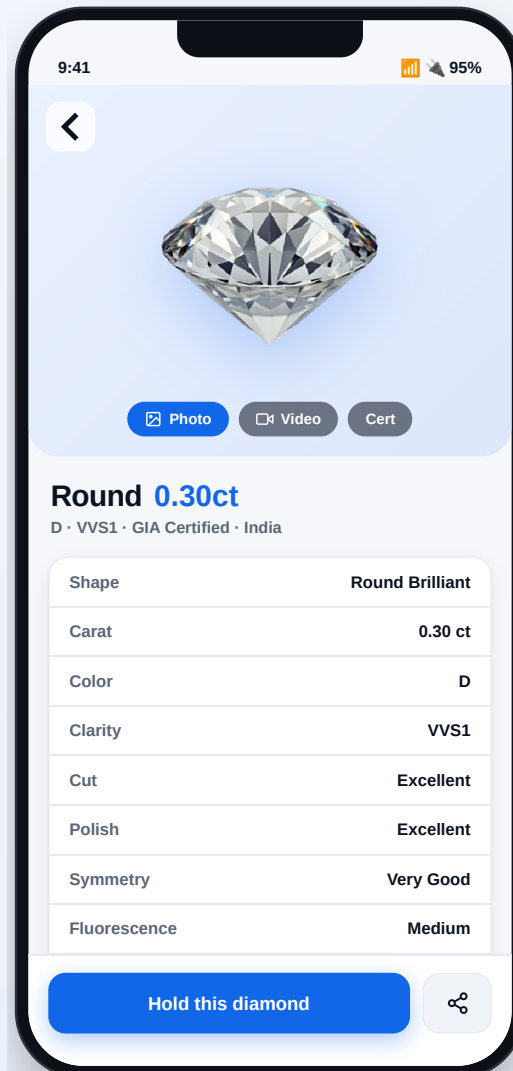

FILTER

Find exactly the right stone

Every filter from your current system is here — shape, colour, clarity, cut/polish/symmetry, carat range, fluorescence, location and more — in a clean slide-up panel designed for thumbs.

- All your existing filters, mobile-first
- **Carat range slider** and quick chips
- Live result count as they refine
- Saved filters can be shared via WhatsApp

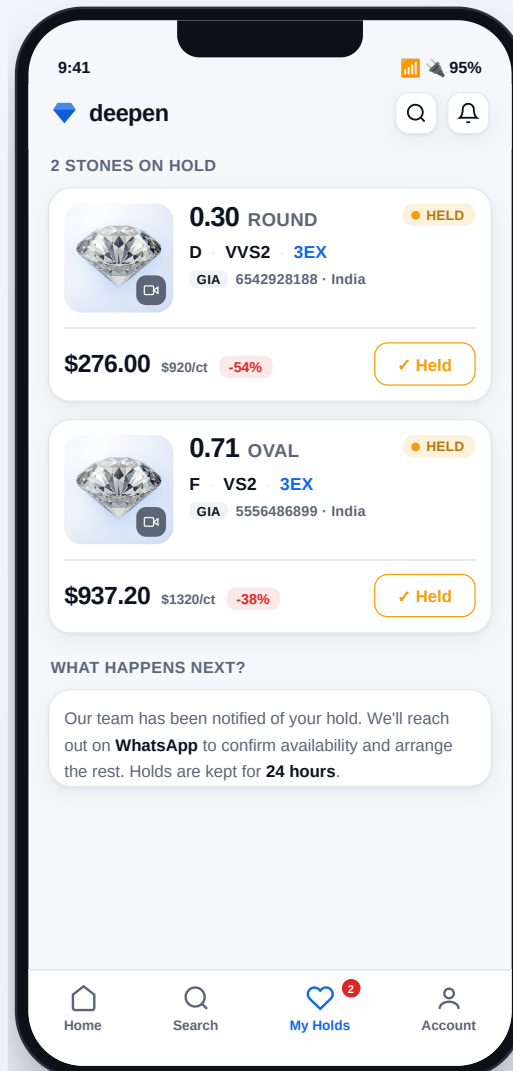

STONE DETAIL

Everything about the diamond

Tapping a stone opens the full detail: photo, 360° video and certificate, the complete spec sheet, and full pricing — with Hold and Share right at the bottom.

- Photo · **video** · **certificate** tabs
- Complete specifications & measurements
- Full pricing — Rap, discount, \$/ct, total
- Hold** or **share this stone** on WhatsApp

MY HOLDS

After the hold — you take over

Once a customer holds stones, the app has done its job. Their holds are listed here, and a clear note tells them you'll be in touch on WhatsApp. From that point, sales and payment are handled by you directly — exactly as you asked.

- ☒ All held stones in one place
- ☒ Clear **“we'll contact you on WhatsApp”** message
- ☒ Holds kept for a set time, then released
- ☒ **No payments or orders** in the app — all manual

Ready to build.

STEP 1

Approve these
designs & load a
sample stock file

STEP 2

Build the app,
admin panel &
inventory import

STEP 3

Go live — app,
PWA & WhatsApp
